

For Loop

Repeats code a specific number of times.

Syntax Example:

```
for ($i = 1; $i <= 3; $i++) {  
    echo $i;  
}
```

Result: 1 2 3

Notes / Tips:

Best when you know how many times to loop.

While Loop

Repeats code as long as the condition is true.

Syntax Example:

```
$i = 1;  
while ($i <= 3) {  
    echo $i;  
    $i++;  
}
```

Result: 1 2 3

Notes / Tips:

Condition is checked before each iteration.

Do While Loop

Runs the code at least once, then repeats while the condition is true.

Syntax Example:

```
$i = 1;
do {
    echo $i;
    $i++;
} while ($i <= 3);
```

Result: 1 2 3

Notes / Tips:

Code executes at least once, even if condition is false.

Useful when first execution must always happen.

Foreach Loop

Iterates over arrays and objects.

Syntax Example:

```
$colors = ["Red", "Green", "Blue"];
foreach ($colors as $color) {
    echo $color;
}
```

Result: RedGreenBlue

Notes / Tips:

Most used loop for arrays.

Cleaner and safer than for with arrays.

Break

Stops the loop immediately.

Syntax Example:

```
for ($i = 1; $i <= 5; $i++) {
    if ($i == 3) {
        break;
    }
}
```

```
}  
echo $i;  
}
```

Result: 1 2

Notes / Tips:

Often used with conditions inside loops.

Also works inside while, foreach, and switch.

Continue

Skips the current iteration and moves to the next one.

Syntax Example:

```
for ($i = 1; $i <= 3; $i++) {  
    if ($i == 2) {  
        continue;  
    }  
    echo $i;  
}
```

Result: 1 3

Notes / Tips:

Does not stop the loop.

Only skips the current cycle.
